Our service department offers a
Preventive Maintenance Program*
 for your bakery equipment.

- **Decrease system downtime**
- **Decrease replacement costs**
- **Improve system reliability**

**Preventive maintenance is a schedule of planned maintenance actions aimed at the prevention of breakdowns and failures.

The primary goal of preventive maintenance is to prevent the failure of equipment before it actually occurs.

It is designed to preserve and enhance equipment reliability by replacing worn components before they actually fail.

Preventive maintenance activities include equipment checks, partial or complete overhauls at specified periods, oil changes, lubrication and so on. In addition, workers can record equipment deterioration so they know to replace or repair worn parts before they cause system failure. The ideal preventive maintenance program would prevent all equipment failure before it occurs.
